

GREEN PURCHASING POLICY

ANTELOPE POINT MARINA

Antelope Point Marina, in providing food service, recreational boat rental services, retail, boat repairs, slip rentals, dry storage, fuel storage and dispensing and facility maintenance in the Antelope Point area of Lake Powell, located in the Glen Canyon National Recreation Area, has implemented a Green Purchasing Program to reduce the use and sale of hazardous products and to increase the use and sale of organic, all natural, renewable, reusable, recyclable, recycled-content materials, or resource-conserving fixtures and equipment.

Our Green Purchasing Program will be used in all operational areas, from food and beverage operations, retail sales, and boat rental operations, to facility maintenance and company transportation. The management of Antelope Point Marina will provide leadership for our Green Purchasing Program and will ensure that the staff of our operational units will implement the intent of this policy on an ongoing basis. Our Green Purchasing Program will also involve outside vendors and service providers to Antelope Point Marina.

The management of Antelope Point Marina will promote the purchasing and testing of potential environmentally responsible products and services, as well as considering the life-cycle costs of buying or using these items by using information from all available sources. We will adopt and use the definition of an environmentally preferable product as it has been defined by the United States Environmental Protection Agency.

Our policy will be to promote communication to all Antelope Point Marina team members, vendors and contractors, and the general public, and we welcome input from all who use our facilities. It is our goal each season to continually maintain or expand our use and sale of these environmentally preferable products.

Through the successful use of our Green Purchasing Program, we will continue to strive to be an environmental leader in providing services to the visiting public, and we will promote this management approach so that it can be used effectively by our current and future team members and support staff.
